AN ACT to amend the executive law, in relation to creating the New York autism spectrum disorders treatment, training and research council and providing for the powers and duties of the council

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

1     Section 1. Intent. The legislature hereby finds and declares that  
2     autism spectrum disorders, hereinafter ASDs, currently affect approxi-  
3     mately one in 110 children and are considered to be an "urgent public  
4     health concern" by the Centers for Disease Control and Prevention.  
5     The legislature further finds that New York state has not responded  
6     sufficiently to this crisis. In its 2010 report, the New York state  
7     Interagency Task Force on Autism, hereinafter Task Force, identified  
8     five primary needs of the growing population of New York citizens  
9     affected by ASDs: coordination of state services, early identification,  
10    lifelong service delivery, increased dissemination of information, and  
11    coordination of research efforts. First, as a collaborative effort of 11  
12    independent state agencies that each serve individuals impacted by ASDs,  
13    the Task Force itself exemplifies the need for coordination of research,  
14    treatment and training responsibilities. Second, while the Task Force  
15    determined that early identification and intervention were crucial to  
16    minimizing the symptoms and impact of ASDs, it reported that only eight  
17    percent of pediatricians routinely screen for ASDs and approximately 30  
18    percent of children with ASDs do not receive the early intervention  
19    services provided by the New York State Department of Health. Third,  
20    recognizing that the thousands of children diagnosed with ASDs will soon

age out of the state's educational system, the Task Force noted a dearth of post-secondary training and transitional services. Fourth, the Task Force determined that individuals and families affected by ASDs would benefit from a centralized clearinghouse of relevant information, and called for the provision of user-friendly access to such information. Finally, the Task Force reported that collaboratively determining the direction of future ASD research would best utilize available public and private funding.

The legislature therefore declares that there is a need to expand treatment, training and research with regard to ASDs -- including the enhancement of efforts to improve access to, and the efficacy of, needed services, support and treatment.
