Introduced by M. of A. THIELE, CONTE, EDDINGTON, FIELDS, RAIA -- Multi-Sponsored by -- M. of A. BOYLE, McDONOUGH -- read once and referred to the Committee on Corporations, Authorities and Commissions

AN ACT to amend the public authorities law, in relation to the board of trustees of the Long Island power authority; to amend the public authorities law, in relation to powers granted to municipalities concerning public utility services; to amend the public service law, in relation to proposed increases in average customer rates; to amend the public authorities law, in relation to hearings of the Long Island power authority and prohibiting the Long Island power authority from owning any portion of any nuclear generating facilities; to amend the public authorities law, in relation to requiring the authority to post any and all contracts on its website; to amend the general municipal law and the local finance law, in relation to the financing of the installation of distributed generation renewable energy sources or energy efficiency improvements; and to repeal certain provisions of the public authorities law relating thereto

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

Section 1. Legislative intent. The legislature finds and declares that:

1. the Long Island power authority was established because the legislature believed that matters of state concern would best be dealt with by replacing such investor owned utility with a publicly owned power authority;

2. a public power authority is best governed by representatives of the public it was established to serve;

3. a democratic principal of energy production must seek to ensure an equitable responsibility for the production of power among the constituents served;

EXPLANATION--Matter in ITALICS (underscored) is new; matter in brackets [ ] is old law to be omitted.

LBD14340-01-9

4. in the future Long Island should seek to reformulate its energy distribution methods so that the various townships will take responsibility for producing the power necessary to match growth;

5. the public election of trustees to the power authority will serve to better represent local interests and issues;

6. as a matter of public policy, relinquishing local control over power production does not allow siting and technology decisions to be made by the most impacted population. Therefore, through the election of local trustees, the communities can work to accept the responsibility for the energy production decisions necessary to accommodate their needs; and

7. the Long Island Power Authority (LIPA) was created by the state to be the retail supplier of electricity and is charged with developing energy policy, rate setting and financial planning for the Long Island service territory. LIPA was intended to "provide safe and adequate service at lower rates while facilitating the shift of investment into more beneficial energy demand/energy supply management alternatives". Moreover, the state intended that LIPA utilize "to the fullest extent practicable, all economical means of conservation, and technologies that rely on renewable energy resources, cogeneration and improvements in energy efficiency which will benefit the interests of the ratepayers of the service area".

The legislature finds that the interests set forth in this section will be best served by a utility operated by an elected board of trustees.
