Introduced by Sen. KRUGER -- read twice and ordered printed, and when printed to be committed to the Committee on Finance

AN ACT to amend the state finance law, in relation to requiring the use of chlorine-free recycled paper

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

Section 1. Legislative intent. The legislature hereby finds and declares that waste reduction and recycling are the highest priorities for solid waste management in New York state and that the state's interest is served when the state government can make more efficient use of natural resources by maximizing recycling whenever possible. The state government's participation in and promotion of waste reduction and recycling activities can significantly reduce the volume of material entering the waste stream, thereby conserving landfill disposal capacity and reducing expenses. The use of recycled paper with post-consumer content by the state government can spur private sector development of new recycling markets and technologies, thereby creating business and employment opportunities and enhancing state and local economies. The legislature further finds that New York state has led the nation in the purchase of post-consumer recycled content paper and that state purchases of recycled paper with post-consumer content will bolster and enhance the recent federal executive order requiring all federal agencies to purchase such paper. Chlorinated compounds are linked to serious health risks including endocrine dysfunction, developmental impairment, birth defects, immunosuppression and cancer and the American Public Health Association and the International Joint Commission on the Great Lakes recommend phasing out chlorine and chlorine compounds in manufacturing processes to reduce or eliminate these health risks. The legislature finally finds that alternative bleaching processes for bleaching in the pulp and paper industry are in widespread use in Europe and have been undertaken at several mills in the United States, demonstrating that

pollution prevention benefits both the economy and the environment. New York state's purchase of chlorine-free paper and paper products will encourage manufacturers to invest in safer production processes and products.
