(PREFILED)

January 4, 2012

Introduced by M. of A. QUART -- read once and referred to the Committee on Health

AN ACT to amend the public health law and the education law, in relation to chronic pain management

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

1 Section 1. Legislative intent: The legislature hereby finds that
2 medical treatment of chronic pain in this state needs to be reexamined
3 to enhance the ability to assess such condition, increase access to
4 appropriate care to treat and mitigate chronic pain, and improve the
5 quality of life for those afflicted with this condition. Currently
6 chronic pain is most often treated by primary care providers who may
7 have little training in the assessment and proper treatment of complex
8 chronic pain conditions. This, in turn, has led, in certain circum-
9 stances, to patients seeing multiple health care providers and experi-
10 encing multiple and repeated diagnostic tests, that lead to inadequate
11 or unproven surgeries, prescription of unneeded or strong pain medica-
12 tions, with its consequential heightened possibility to lead to the long
13 term addiction to such strong pain medications, and the performance of
14 procedures or treatment regimens that are not able to successfully treat
15 or mitigate such chronic pain.

16 Further, the current practice of the repeated utilization of different
17 health practitioners, tests and unnecessary medical procedures to treat
18 such chronic pain is resulting in higher health care costs. These
19 increased costs come from unnecessary visits to health care practition-
20 ers, more and longer hospital stays, performing unnecessary surgeries or
21 other medical procedures, and unnecessary prescription of costly and
22 dangerous drugs. This inefficient use of valuable health care resources
23 is contributing to the rapidly increasing cost of providing health care.
24 With the continuing aging of New York's general population, this trend
25 may only continue to grow. Further, the consequences to patients
26 afflicted with chronic pain will continue to undermine the physical,

1 social, economic and psychological well being of such patients, their
2 families and loved ones.

3 The current health care delivery system both over treats and under-
4 treats those afflicted with chronic pain. Ideally, all patients subject
5 to chronic pain should be able to obtain an appropriate assessment of
6 the underlying conditions that cause such pain, followed by an appropri-
7 ate plan of care that reflects the best practices currently available to
8 prevent the adverse effects of pain. Such care should be provided in a
9 coordinated manner that minimizes such chronic pain and is cost effec-
10 tive for the patient, health care delivery system, and for employers of
11 such persons. In sum, the provision of chronic pain treatments needs a
12 major reassessment to enhance assessment capabilities, increase access
13 to appropriate care, improve the quality of care, and do so in a manner
14 that minimizes the cost of providing such care.

15 S 2. The public health law is amended by adding a new article 28-F to
