AN ACT to amend the education law, in relation to education on celiac disease; and to amend the tax law and the state finance law, in relation to the celiac disease awareness and research fund

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

- 1 Section 1. Legislative intent. The legislature hereby finds the
2 following:
- 3 a. Celiac disease is a digestive disease that damages the small intestine and interferes with absorption of nutrients from food.
- 4 b. Celiac disease affects people in all parts of the world. Originally
5 thought to be a rare childhood syndrome, celiac disease is now known to
6 be a common genetic disorder.
- 7 c. More than two million people in the United States have the disease,
8 or about 1 in 133 people.
- 9 d. People who have celiac disease cannot tolerate gluten, a protein in
10 wheat, rye, and barley. Gluten is found mainly in foods but may also be
11 found in everyday products such as medicines, vitamins and lip balms.
- 12 e. When people with celiac disease eat foods or use products containing
13 gluten, their immune system responds by damaging or destroying
14 villi, the tiny, fingerlike protrusions lining the small intestine. Villi
15 normally allow nutrients from food to be absorbed through the
16 walls of the small intestine into the bloodstream. Without healthy
17 villi, a person becomes malnourished, no matter how much one eats.
- 18 f. People with celiac disease may have no symptoms but can still
19 develop complications of the disease over time. Long-term complications
20 include malnutrition which can lead to anemia, osteoporosis and miscar-
