2013-2014 Regular Sessions

SENATE-ASSEMBLY

(PREFILED)

January 9, 2013

- IN SENATE -- Introduced by Sen. LAVALLE -- read twice and ordered printed, and when printed to be committed to the Committee on Local Government
- IN ASSEMBLY -- Introduced by M. of A. THIELE -- read once and referred to the Committee on Local Governments
- AN ACT to amend the general municipal law, in relation to creating the Peconic Bay regional transportation council; and providing for the repeal of such provisions upon expiration thereof

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

1 Section 1. Legislative findings. The legislature hereby finds that 2 over the past thirty years, rapid growth and development in the Peconic 3 Bay region of Long Island, while providing for a successful economy, has 4 also resulted in some unavoidable, adverse impacts that threaten the 5 region's future quality of life and future economic prosperity. Traffic 6 congestion has been one of the primary adverse impacts from such rapid 7 development.

8 Expanding traffic congestion has resulted in deteriorating traffic 9 safety with increased traffic accidents and fatalities. In addition, 10 traffic congestion has resulted in increased trip delays, declining air 11 quality, adverse impacts to historic and rural resources in the region's 12 villages and hamlets, parking problems, adverse impacts to residential 13 communities and neighborhoods resulting from the diversion of traffic from major highways and arteries to rural residential streets and roads. 14 The region's tourist and second home industries, the cornerstone of 15 16 its prosperity, are threatened if the adverse consequences of traffic 17 congestion are not promptly and adequately addressed. Further, projections from the state department of transportation and local governments 18 indicate that there will be a continued growth in year-round population, 19

1 seasonal residents, and traffic into the foreseeable future, exacerbat-2 ing an already major problem.

3 The legislature finds that the unique geography of the Peconic Bay 4 region limits the ability to expand highway capacity for motor vehicles. 5 The narrow forks limit the augmentation of future highway capacity in an 6 east-west direction. The construction of new highways is not a feasible 7 alternative, and the option of improving capacity on existing highways 8 is limited. In addition to unique geography, impacts to the region's natural and historic resources, such as open space, farmland, watershed 9 10 areas, wetlands, and historic sites and landmarks also limit increasing 11 highway capacity.

12 While the region's highway infrastructure is severely overburdened, 13 its public transit capabilities are underdeveloped. The region possesses 14 underutilized rail capacity with minimal service from the Long Island 15 Rail Road to the region.

16 The legislature finds that the development of new public transit 17 opportunities for the Peconic Bay region represents the best alternative 18 to address growing traffic congestion and other transportation problems. 19 The region possesses an existing rail infrastructure. Existing service 20 to the region is minimal. Further, there is no coordination between rail 21 service and existing bus service. The opportunity to improve service is 22 clearly available.

23 The region's local governments have recognized the adverse impacts 24 resulting from growing traffic congestion and the need to explore other 25 transportation options such as public transit. Independently, the 26 comprehensive plans of the region's towns and villages have cited traffic congestion as a critical problem and have identified improved public 27 28 transit as a future goal. Towns have created task forces and commissions 29 to address the transportation issue.

Further, collectively, as a region, the local governments have 30 joined 31 together explore public transit options to mitigate traffic to 32 congestion. As early as 1994, the East End Economic and Environmental 33 Institute, under the auspices of the East End Mayors and Supervisors Association issued a report entitled Blue Print for Our Future which 34 35 called for improved and coordinated bus and rail service in the Peconic 36 Bay region.

In 2005, after a four-year public outreach process, the local governments of the region issued the result of its SEEDS (Sustainable East End Development) project. This initiative also recognized the need to create improved transportation opportunities, including selected road improvements and increased and coordinated public transit.

42 The private sector has also recognized the need for improved regional 43 transportation opportunities. The Institute for Sustainable Development, 44 Southampton College of Long Island University, held a conference and 45 issued a report calling for improved transportation opportunities in the region. Five Town Rural Transit, Inc., a private, not-for-profit corpo-46 47 ration has also recognized the need for public transit improvements. In 48 2005, they unveiled a conceptual plan for an East End Shuttle providing 49 coordinated bus and rail service, and issued a development proposal to 50 further that goal.

In 2007, the state of New York provided a \$300,000 grant under its Shared Municipal Services Initiative (SMSI) program to study the feasibility of the East End Shuttle concept. In addition, the Long Island Rail Road, in conjunction with the towns of Southampton and East Hampton initiated a pilot program in 2007-2008 to provide a rail shuttle and connecting bus service during the reconstruction of County Road 39. This

pilot program demonstrated that the rail/bus shuttle concept could be 1 2 successful. In 2009, the "East End Transportation Study Report", funded 3 by the SMSI program, was completed by the Volpe National Transportation 4 Systems Center, U.S. Department of Transportation. The study concluded 5 that the East End Shuttle concept was both viable and desirable.

In summary, the problem of traffic congestion with its adverse impacts 6 7 on the local environment, economy, and quality of life has long been recognized. Further, a multitude of local governments, regional cooper-8 ative initiatives, and private initiatives have all identified improved 9 10 public transit with increased and coordinated rail and bus service as the cornerstone for solving the problem. The concept has been at the 11 12 center of public policy discussions for more than a decade.

The next step is the full development of the East End Shuttle concept 13 14 in order to implement new transit opportunities in a timely fashion.

15 Currently, no governmental entity exists which can coordinate the multitude of local governments, state government, federal government, 16 17 and other stakeholders that must participate to implement a successful public transit initiative for the Peconic Bay region. 18

intent of the legislature with this act to provide the 19 is the Ιt necessary governmental framework and resources that will foster the 20 21 cooperation necessary to implement a public transit proposal for the 22 Peconic Bay region. This legislation will give the local governments the regional framework to develop and implement this initiative, and will 23 24 mandate the cooperation of state and federal agencies. Further, it will 25 provide for the involvement of all stakeholders and community members in 26 the development process to insure an open and comprehensive decision 27 making process.
