AN ACT to amend the administrative code of the city of New York, in relation to New York city transit omnibus safety requirements

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

Section 1. Legislative findings. The occupation of driving an omnibus available to the general public has become increasingly dangerous to bus drivers employed by the New York city transit authority and its subsidiaries. There has been an increase in the number of bus drivers who have become victims of assaults, verbal attacks, spitting, menacing and threats at the hands of bus riders. Unlike the work environment of transit employees deployed on the subway trains, there is no discernible police presence on these buses, and the driver is relatively defenseless while operating a bus on a congested urban street, against an aggressive bus passenger seeking to harm him or her.

11 The legislature finds that a safety partition between the bus drivers the passengers on the vehicle can be an effective deterrent to any 12 13 harm being inflicted on the transit worker. Such partitions have been 14 highly effective in protecting taxi cab and livery car drivers from aggressive acts by passengers inside their vehicles. A similar require-15 ment protecting bus operators should be equally effective and would 16 promote public safety for the riding public on mass transit surface 17 18 vehicles.

The legislature also finds that current emergency communication protocols of the New York city transit authority and its subsidiaries are not operating at an optimum efficiency level. Nearly all buses are currently equipped with a silent alarm mechanism which alerts the transit authority's command center that an emergency exists and also with a GPS device which can apprise the command center of the location of the bus. More meaningful information and more importantly, a more timely intervention by first responders and transit supervisors, could be conveyed if the two existing devices worked in tandem with one another. That the emergency alarm be synchronized with the GPS device so that when it is activated it can simultaneously convey the location of the bus sounding the alarm. The legislature finds these two common sense initiatives can significantly improve the safety on mass transit buses operating within New York city at a very modest cost.
