Introduced by M. of A. ROSENTHAL -- read once and referred to the  
Committee on Higher Education

AN ACT to amend the public health law and the education law, in relation  
to chronic pain management

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY,  
DO ENACT AS FOLLOWS:

1     Section 1. Legislative intent: The legislature hereby finds that  
2     medical treatment of chronic pain in this state needs to be reexamined  
3     to enhance the ability to assess such condition, increase access to  
4     appropriate care to treat and mitigate chronic pain, and improve the  
5     quality of life for those afflicted with this condition. Currently  
6     chronic pain is most often treated by primary care providers who may  
7     have little training in the assessment and proper treatment of complex  
8     chronic pain conditions. This, in turn, has led, in certain circumstances,  
9     to patients seeing multiple health care providers and experiencing  
10    multiple and repeated diagnostic tests, that lead to inadequate  
11    or unproven surgeries, prescription of unneeded or strong pain medications,  
12    with its consequential heightened possibility to lead to the long  
13    term addiction to such strong pain medications, and the performance of  
14    procedures or treatment regimens that are not able to successfully treat  
15    or mitigate such chronic pain.

16    Further, the current practice of the repeated utilization of different  
17    health practitioners, tests and unnecessary medical procedures to treat  
18    such chronic pain is resulting in higher health care costs. These  
19    increased costs come from unnecessary visits to health care practitioners,  
20    more and longer hospital stays, performing unnecessary surgeries or  
21    other medical procedures, and unnecessary prescription of costly and  
22    dangerous drugs. This inefficient use of valuable health care resources  
23    is contributing to the rapidly increasing cost of providing health care.  
24    With the continuing aging of New York's general population, this trend  
25    may only continue to grow. Further, the consequences to patients  
26    afflicted with chronic pain will continue to undermine the physical,  
27    social, economic and psychological well being of such patients, their  
28    families and loved ones.

EXPLANATION--Matter in *ITALICS* (underscored) is new; matter in brackets  
[ ] is old law to be omitted.

LBD02105-05-4

1 The current health care delivery system both over treats and under-  
2 treats those afflicted with chronic pain. Ideally, all patients subject  
3 to chronic pain should be able to obtain an appropriate assessment of  
4 the underlying conditions that cause such pain, followed by an appropri-  
5 ate plan of care that reflects the best practices currently available to  
6 prevent the adverse effects of pain. Such care should be provided in a  
7 coordinated manner that minimizes such chronic pain and is cost effec-  
8 tive for the patient, health care delivery system, and for employers of  
9 such persons. In sum, the provision of chronic pain treatments needs a  
10 major reassessment to enhance assessment capabilities, increase access  
11 to appropriate care, improve the quality of care, and do so in a manner  
12 that minimizes the cost of providing such care.

13 S 2. The public health law is amended by adding a new article 28-F to
