19 20 Section 1. Legislative intent. The legislature hereby finds and declares that a coordinated program of research, entrepreneurship, and public-private partnerships and collaborations centered in and with the state's public and private medical schools can significantly increase the speed and amount of commercialization of research from lab to market, materially expanding economic and job opportunities for all New Yorkers in this high growth sector and increasing the likelihood of high impact healthcare breakthroughs, which will improve the health and wellbeing of New Yorkers and potentially reduce health care costs.

The legislature further finds that although New York state's biomedical and biotechnological research and infrastructure includes many of the nation's top institutions, researchers and scientists, and has many natural advantages compared to other states, development has lagged behind the nation as a whole and many states in job growth and economic activity for a decade; and further, that as other states make significant and targeted investments to recruit top tier scientists and researchers, and develop incentives that are creating rapid growth, the gap between New York and other states will increase, along with a potential migration of scientific and research talent to other states in search of opportunity and professional advancement.

The legislature further finds that recent changes that have made New 22 York's economic development programs more sophisticated and competitive

can be combined with other statutory approaches and precedents to support and incentivize an effective plan for development of biomedical and biotechnological entrepreneurship by and through the medical schools this state, and declares that the program enacted by this act will expand economic activity and job development; maintain and attract high quality scientists and researchers; increase resources available to the schools and researchers from grants, private investments, patents, royalties, and licensure, and leverage significant partnerships with public and private entities; enhance our scientific and research capabilities; and increase the speed of commercialization of research and the expansion of economic opportunity, which are in every sense to the benefit of the people of this state.

The economic development law is amended by adding a new article 22 to read as follows:
