2015-2016 Regular Sessions

I N A S S E M B L Y

January 28, 2015

Introduced by M. of A. MORELLE -- read once and referred to the Committee on Economic Development

AN ACT to amend the economic development law, in relation to the New York state biomedical and biotechnological translational research and entrepreneurship initiative

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

1 Section 1. Legislative intent. The legislature hereby finds and
2 declares that a coordinated program of research, entrepreneurship, and
3 public-private partnerships and collaborations centered in and with the
4 state's public and private medical schools can significantly increase
5 the speed and amount of commercialization of research from lab to
6 market, materially expanding economic and job opportunities for all New
7 Yorkers in this high growth sector and increasing the likelihood of high
8 impact healthcare breakthroughs, which will improve the health and well-
9 being of New Yorkers and potentially reduce health care costs.
10 The legislature further finds that although New York state's biomed-
11 cal and biotechnological research and infrastructure includes many of
12 the nation's top institutions, researchers and scientists, and has many
13 natural advantages compared to other states, development has lagged
14 behind the nation as a whole and many states in job growth and economic
15 activity for a decade; and further, that as other states make signif-
16 icant and targeted investments to recruit top tier scientists and
17 researchers, and develop incentives that are creating rapid growth, the
18 gap between New York and other states will increase, along with a poten-
19 tial migration of scientific and research talent to other states in
20 search of opportunity and professional advancement.
21 The legislature further finds that recent changes that have made New
22 York's economic development programs more sophisticated and competitive
23 can be combined with other statutory approaches and precedents to
24 support and incentivize an effective plan for development of biomedical

1 and biotechnological entrepreneurship by and through the medical schools
2 in this state, and declares that the program enacted by this act will
3 expand economic activity and job development; maintain and attract high
4 quality scientists and researchers; increase resources available to the
5 schools and researchers from grants, private investments, patents,
6 royalties, and licensure, and leverage significant partnerships with
7 public and private entities; enhance our scientific and research capa-
8 bilities; and increase the speed of commercialization of research and
9 the expansion of economic opportunity, which are in every sense to the
10 benefit of the people of this state.

11 S 2. The economic development law is amended by adding a new article
12 22 to read as follows:
