AN ACT to amend the general municipal law, in relation to creating the Peconic Bay regional transportation council; and providing for the repeal of such provisions upon expiration thereof

THE PEOPLE OF THE STATE OF NEW YORK, REPRESENTED IN SENATE AND ASSEMBLY, DO ENACT AS FOLLOWS:

1 Section 1. Legislative findings. The legislature hereby finds that
2 over the past thirty years, rapid growth and development in the Peconic
3 Bay region of Long Island, while providing for a successful economy, has
4 also resulted in some unavoidable, adverse impacts that threaten the
5 region's future quality of life and future economic prosperity. Traffic
6 congestion has been one of the primary adverse impacts from such rapid
7 development.
8 Expanding traffic congestion has resulted in deteriorating traffic
9 safety with increased traffic accidents and fatalities. In addition,
10 traffic congestion has resulted in increased trip delays, declining air
11 quality, adverse impacts to historic and rural resources in the region's
12 villages and hamlets, parking problems, adverse impacts to residential
13 communities and neighborhoods resulting from the diversion of traffic
14 from major highways and arteries to rural residential streets and roads.
15 The region's tourist and second home industries, the cornerstone of
16 its prosperity, are threatened if the adverse consequences of traffic
17 congestion are not promptly and adequately addressed. Further, projec-

1 tions from the state department of transportation and local governments
2 indicate that there will be a continued growth in year-round population,
3 seasonal residents, and traffic into the foreseeable future, exacerbat-
4 ing an already major problem.

5 The legislature finds that the unique geography of the Peconic Bay
6 region limits the ability to expand highway capacity for motor vehicles.
7 The narrow forks limit the augmentation of future highway capacity in an
8 east-west direction. The construction of new highways is not a feasible
9 alternative, and the option of improving capacity on existing highways
10 is limited. In addition to unique geography, impacts to the region's
11 natural and historic resources, such as open space, farmland, watershed
12 areas, wetlands, and historic sites and landmarks also limit increasing
13 highway capacity.

14 While the region's highway infrastructure is severely overburdened,
15 its public transit capabilities are underdeveloped. The region possesses
16 underutilized rail capacity with minimal service from the Long Island
17 Rail Road to the region.

18 The legislature finds that the development of new public transit
19 opportunities for the Peconic Bay region represents the best alternative
20 to address growing traffic congestion and other transportation problems.
21 The region possesses an existing rail infrastructure. Existing service
22 to the region is minimal. Further, there is no coordination between rail
23 service and existing bus service. The opportunity to improve service is
24 clearly available.

25 The region's local governments have recognized the adverse impacts
26 resulting from growing traffic congestion and the need to explore other
27 transportation options such as public transit. Independently, the
28 comprehensive plans of the region's towns and villages have cited traf-
29 fic congestion as a critical problem and have identified improved public
30 transit as a future goal. Towns have created task forces and commissions
31 to address the transportation issue.

32 Further, collectively, as a region, the local governments have joined
33 together to explore public transit options to mitigate traffic
34 congestion. As early as 1994, the East End Economic and Environmental
35 Institute, under the auspices of the East End Mayors and Supervisors
36 Association issued a report entitled Blue Print for Our Future which
37 called for improved and coordinated bus and rail service in the Peconic
38 Bay region.

39 In 2005, after a four-year public outreach process, the local govern-
40 ments of the region issued the result of its SEEDS (Sustainable East End
41 Development) project. This initiative also recognized the need to create
42 improved transportation opportunities, including selected road improve-
43 ments and increased and coordinated public transit.

44 The private sector has also recognized the need for improved regional
45 transportation opportunities. The Institute for Sustainable Development,
46 Southampton College of Long Island University, held a conference and
47 issued a report calling for improved transportation opportunities in the
48 region. Five Town Rural Transit, Inc., a private, not-for-profit corpo-
49 ration has also recognized the need for public transit improvements. In
50 2005, they unveiled a conceptual plan for an East End Shuttle providing
51 coordinated bus and rail service, and issued a development proposal to
52 further that goal.

53 In 2007, the state of New York provided a \$300,000 grant under its
54 Shared Municipal Services Initiative (SMSI) program to study the feasi-
55 bility of the East End Shuttle concept. In addition, the Long Island
56 Rail Road, in conjunction with the towns of Southampton and East Hampton

initiated a pilot program in 2007-2008 to provide a rail shuttle and connecting bus service during the reconstruction of County Road 39. This pilot program demonstrated that the rail/bus shuttle concept could be successful. In 2009, the "East End Transportation Study Report", funded by the SMSI program, was completed by the Volpe National Transportation Systems Center, U.S. Department of Transportation. The study concluded that the East End Shuttle concept was both viable and desirable.

In summary, the problem of traffic congestion with its adverse impacts on the local environment, economy, and quality of life has long been recognized. Further, a multitude of local governments, regional cooperative initiatives, and private initiatives have all identified improved public transit with increased and coordinated rail and bus service as the cornerstone for solving the problem. The concept has been at the center of public policy discussions for more than a decade.

The next step is the full development of the East End Shuttle concept in order to implement new transit opportunities in a timely fashion.

Currently, no governmental entity exists which can coordinate the multitude of local governments, state government, federal government, and other stakeholders that must participate to implement a successful public transit initiative for the Peconic Bay region.

It is the intent of the legislature with this act to provide the necessary governmental framework and resources that will foster the cooperation necessary to implement a public transit proposal for the Peconic Bay region. This legislation will give the local governments the regional framework to develop and implement this initiative, and will mandate the cooperation of state and federal agencies. Further, it will provide for the involvement of all stakeholders and community members in the development process to insure an open and comprehensive decision making process.
