STATE OF NEW YORK

260

2019-2020 Regular Sessions

IN SENATE

(Prefiled)

January 9, 2019

Introduced by Sen. ORTT -- read twice and ordered printed, and when printed to be committed to the Committee on Environmental Conservation

AN ACT to amend the environmental conservation law, in relation to the regulation of live restraint cable devices to take wildlife; and providing for the repeal of such provisions upon the expiration thereof

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. Subdivision 5 of section 11-1101 of the environmental conservation law is amended to read as follows:

5. **a.** Except as provided in subdivision 1 or 2 of section 11-0523 **of this article** with respect to destructive and menacing wildlife, no person shall (a) set or use a trap of the leg-gripping type having teeth in the jaws; (b) set a **leg hold** trap so that wildlife when caught is suspended; (c) use, locate or set a snare or a device consisting of a noose of any material whereby an animal may be taken.

b. Notwithstanding the provisions of paragraph a of this subdivision, the department may, by regulation, authorize the use of live restraint cable devices to take coyote and other species as allowed by the department in the state. The use of live restraint cable devices shall only be permitted for a period of time specified by the department beginning no earlier than December first. Such regulations shall include live cable restraint devices consisting of at least one swivel, a relaxing lock, a deer stop, and a break away device. Such regulations shall also require that any person using a live restraint cable shall check such device at least once every twenty-four hours. For the purposes of this provision:

(a) a swivel is a device incorporated at the end of the cable restraint which allows the captured animal to freely rotate;

EXPLANATION--Matter in *italics* (underscored) is new; matter in brackets [-] is old law to be omitted.

LBD02198-01-9

(b) a relaxing lock is a device that allows the cable loop to stop restricting when the captured animal stops pulling;

(c) a deer stop is a device incorporated into the loop of the cable restraint that keeps the cable restraint from closing beyond a specified circumference to allow deer that may encounter the restraint to escape; and

(d) a break away device allows the loop of the cable restraint to break open when a specified amount of force is applied.

Trappers using live cable restraint devices must complete a training course in their construction and use offered by the department.

§ 2. This act shall take effect immediately and shall expire and be deemed repealed February 16, 2022.
