8431

2021-2022 Regular Sessions

## IN ASSEMBLY

November 17, 2021

Introduced by M. of A. GALLAGHER -- read once and referred to the  
Committee on Governmental Operations

AN ACT to amend the executive law, in relation to enacting the "all-electric building act"

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

1 Section 1. Short title. This act shall be known and may be cited as  
2 the "all-electric building act".

3 § 2. The executive law is amended by adding a new section 382-c to  
4 read as follows:

5 § 382-c. All-electric buildings. 1. As used in this section:

6 a. "All-electric building or project" shall mean a building or project  
7 that uses a permanent supply of electricity as the sole source of energy  
8 to meet building energy needs. An all-electric building or project shall  
9 have no natural gas, propane, or oil heaters, boilers, piping systems,  
10 fixtures or infrastructure installed to meet building energy needs.

11 b. "Building energy needs" shall mean all space conditioning including  
12 heating and cooling, water heating including pools and spas, cooking  
13 appliances and clothes drying appliances.

14 c. "All-electric ready" shall mean a building, project, or portion  
15 thereof that contains electrical systems and designs that provide suffi-  
16 cient capacity for a future retrofit of a mixed-fuel building to an  
17 all-electric building, including sufficient space, drainage, electrical  
18 conductors or raceways, bus bar capacity, and overcurrent protective  
19 devices for such retrofit. The department of state shall promulgate  
20 guidelines for an electric-ready building on or before January first,  
21 two thousand twenty-three.

22 d. "Mixed-fuel building" shall mean a building that uses a combination  
23 of electricity and natural gas, propane, or oil to meet building energy  
24 needs. For the purposes of this section, "mixed-fuel building" shall  
25 not include buildings that use geothermal or solar energy to meet heat-

ing and/or cooling building energy needs but are otherwise all-electric buildings.

e. "Mixed-use building" shall mean a building used for both residential and commercial purposes.

2. a. No city, town or village shall issue a permit for the construction of any new commercial, residential, or mixed-use building that is not an all-electric building if the initial application for such permit was submitted after December thirty-first, two thousand twenty-three, unless the circumstances set forth in paragraph b of this subdivision apply. For purposes of this subdivision, the initial application shall be the first site or building permit application associated with the building or project.

b. Notwithstanding the provisions of paragraph a of this subdivision, a city, town, or village may issue a permit for construction of a new mixed-fuel building upon a finding by the permitting body of such city, town, or village that constructing an all-electric building or project is physically or technically infeasible and that a modification is warranted. Financial considerations shall not be a sufficient basis to determine physical or technical infeasibility. Modifications shall only be issued under this exception where the permitting body finds that:

(i) sufficient evidence was submitted to substantiate the infeasibility of an all-electric building or project design. Such evidence must show that the building either:

A. cannot satisfy necessary building code requirements without the usage of gas or oil piping systems, fixtures and/or infrastructure; or

B. if the building is specifically designated for occupancy by a commercial food service establishment, that such establishment cannot feasibly operate using commercially available all-electric appliances;

(ii) the installation of natural gas or oil piping systems, fixtures and/or infrastructure is strictly limited to the system and area of the building for which all-electric building or project design is infeasible;

(iii) the area or service within the project where gas or oil piping systems, fixtures and/or infrastructure are installed is all-electric ready; and

(iv) the project's modified design provides equivalent health, safety and fire-protection to all-electric building or project design.

3. No local permitting body shall issue building or construction permits that would convert an all-electric building or project into a mixed-fuel building where the initial application was submitted after December thirty-first, two thousand twenty-two.

4. On or before February first, two thousand twenty-three, the department of public service, the division of housing and community renewal, the department of state, and the energy research and development authority shall report jointly to the governor, the temporary president of the senate, the minority leader of the senate, the speaker of the assembly, and the minority leader of the assembly, regarding what changes to electric rate designs, new or existing subsidy programs, policies, or laws are necessary to ensure this section does not diminish the production of affordable housing or the affordability of electricity for customers in all-electric buildings. For the purpose of this subdivision, "affordability of electricity" shall mean that electricity does not cost more than six percent of a residential customer's income.

§ 3. This act shall take effect immediately.
