STATE OF NEW YORK

535

2021-2022 Regular Sessions

IN ASSEMBLY

(Prefiled)

January 6, 2021

Introduced by M. of A. CAHILL -- read once and referred to the Committee on Energy

AN ACT to amend the energy law, the public service law, the public authorities law and the rural electric cooperative law, in relation to establishing the "New York grid modernization act"

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

1 Section 1. Short title. This act shall be known and may be cited as 2 the "New York grid modernization act".

3 § 2. Legislative findings and purpose. The legislature finds that the 4 widely acknowledged bottlenecks in the state's aging infrastructure have 5 resulted in high delivery costs for the downstate region and struggling б power plants upstate. This outdated transmission system is leading to 7 unnecessary congestion costs. Additionally, increasingly frequent trau-8 matic weather events have highlighted the unreliability and uncertainty of our current system. Investments to modernize the state's infrastruc-9 10 ture are needed to reach our energy goals as society's growing reliance 11 on electricity along with advancements in smart grid technology have 12 made the old model obsolete.

The legislature further finds and recognizes that as the available resources and technologies evolve, the design of the smart grid must be capable of adapting to shifting conditions and priorities to meet utility and customer needs. In the short term, utilities should pursue established and reliable technologies that can provide a relatively certain return on investment.

19 In the longer term, federal investment has provided for smart grid 20 projects nationwide, which will generate a significant base of knowledge 21 that will help identify technologies that are most effective.

The legislature also finds that half of the current workforce involved in the production and delivery of our electricity will be retired or no

EXPLANATION--Matter in <u>italics</u> (underscored) is new; matter in brackets [-] is old law to be omitted.

LBD01444-01-1

longer in that workforce within the next several years. Workforce 1 recruitment campaigns developed by utilities, in conjunction with train-2 ing facilities that provide certification for skilled positions and 3 offer tuition assistance, will attract knowledgeable workers who will be 4 5 instrumental in the implementation of a modernized electric grid. б § 3. Section 6-102 of the energy law is amended by adding a new subdi-7 vision 7 to read as follows: 8 7. The board shall take an active role in advising the public service 9 commission in the development of, and any subsequent revisions to, the 10 grid modernization order required pursuant to section sixty-six-q of the 11 public service law. § 4. The public service law is amended by adding a new section 66-q to 12 13 read as follows: 14 <u>§ 66-q. Establishment of grid modernization program. 1. Definitions.</u> As used in this section: (a) "Electric transmission and distribution 15 16 company" or "transmission and distribution company" shall be known as an 17 investor-owned utility having annual revenues in excess of two hundred million dollars that transmits and distributes electricity within this 18 19 state or a municipality that distributes electricity and receives less 20 than its entire electric supply from the power authority of the state of 21 New York and is subject to the jurisdiction of the commission with respect to the regulation of the price of electricity. 22 (b) "Full load municipal electric customer", shall be known as a muni-23 24 cipality that distributes electricity and receives its entire electric 25 supply from the power authority of the state of New York; 26 (c) "Cooperative" shall have the same meaning as such term is defined 27 in subdivision (a) of section two of the rural electric cooperative law. (d) "New York transmission and distribution coordinating council" or 28 29 "transmission council" shall be known as a consortium which shall be 30 formed pursuant to this act for the purpose of identifying areas of 31 electrical congestion within New York's high voltage transmission system 32 comprising: 33 (i) Consolidated Edison, Orange and Rockland Utilities, Central Hudson Gas and Electric, Niagara Mohawk d/b/a National Grid, New York State 34 35 Electric and Gas and Rochester Gas and Electric; 36 (ii) Public power authorities; and 37 (iii) the New York state energy research and development authority; 38 (e) "New York's high voltage transmission system" or "high voltage transmission system" shall mean electric transmission lines as such term 39 is referred to in paragraph (a) of subdivision two of section one 40 41 hundred twenty of this chapter, provided that electric transmission 42 lines shall also include electric transmission lines located wholly 43 underground in a city in excess of one hundred twenty-five thousand persons or a primary transmission line approved by the federal energy 44 45 regulatory commission in connection with a hydro-electric facility and 46 other equipment necessary for electric transmission. 47 (f) "Public power authorities" shall be known as the power authority 48 of the state of New York and the Long Island power authority. 49 (g) "Smart grid" shall be known as investments and policies that together promote one or more of the following goals: 50 51 (i) Increased use of digital information and controls technology to 52 improve reliability, security and efficiency of the electric grid; 53 (ii) Dynamic optimization of grid operations and resources, with full 54 cyber security; 55 (iii) Deployment and integration of distributed resources and gener-56 ation, including renewable resources;

1	(iv) Development and incorporation of demand-response, demand-side
2	resources, and energy efficiency resources;
3	(v) Deployment of "smart" technologies, real-time, automated, interac-
4	tive technologies that optimize the physical operation of appliances and
5	consumer devices for metering, communications concerning grid operations
6	and status, and distribution automation.
7	(vi) Integration of "smart" appliances and consumer devices;
8	
	(vii) Deployment and integration of advanced electricity storage and
9	peak-shaving technologies, including plug-in electric and hybrid elec-
10	tric vehicles, thermal-storage air conditioning and renewable energy
11	generation;
12	(viii) Provision to consumers of timely information and control
13	options;
14	(ix) Development of open access standards for communication and inter-
15	operability of appliances and equipment connected to the electric grid,
16	including the infrastructure serving the grid;
17	(x) Identification and lowering of unreasonable or unnecessary barri-
18	ers to adoption of Smart Grid technologies, practices, services, and
19	business models that support energy efficiency, demand-response, and
20	<u>distributed generation; and</u>
21	(xi) Advanced metering infrastructure.
22	(h) "Advanced metering infrastructure" or "AMI" shall be known as the
23	communications hardware and software and associated system software that
24	is designed to create a network between advanced meters and electric
25	transmission and distribution company systems and allow for collection
26	and distribution of information to customers and other authorized
27	parties in addition to providing information to transmission and
28	distribution companies.
29	(i) "Smart grid advisory council" means the group of stakeholders
30	formed pursuant to paragraph (a) of subdivision two of this section for
31	purposes of advising and working with the public service commission to
32	determine the feasibility of the development and implementation of a
33	Smart Grid Advanced Metering Infrastructure Deployment Plan.
34	(j) "Workforce development" shall mean training initiatives and
35	curriculum sponsored by transmission and distribution companies and
36	public power authorities that will ensure sufficient staffing to imple-
37	ment the grid modernization programs. Such workforce development
38	programs shall be undertaken through partnerships with state universi-
39	ties, community colleges, boards of cooperative education and other
40	entities accredited by the American National Standards Institute for the
41	purposes of implementing grid modernization programs.
42	2. Smart grid advisory council. (a) Within one hundred eighty days of
43	the effective date of this section the smart grid advisory council
44	("council") shall be established. The council shall be composed of seven
45	voting members, with each member possessing either technical, business
46	or consumer expertise in smart grid technology. Five members shall be
47	appointed by the governor, one member shall be appointed by the tempo-
48	rary president of the senate and one member shall be appointed by the
49	speaker of the assembly. The governor shall appoint the chairperson of
50	the New York state energy research and development authority to serve as
50 51	chairperson of the council. Members of the council, except those that
51 52	are employees or officers of the state, its authorities or agencies,
5⊿ 53	shall not receive a salary or other compensation, but shall be allowed
54 55	the necessary and actual expenses incurred in the performance of duties
55	under this section. Any reasonable costs associated with functioning of

1	the council shall be borne by the New York state energy research and
2	development authority.
3	(b) Within six months of the establishment of the council, the smart
4	grid advisory council shall submit a report to the commission on the
5	feasibility of establishing a statewide smart grid system. Such report
б	shall analyze the potential for the statewide development of a smart
7	grid system that would:
8	(i) utilize digital information technology and communications networks
9	to gather and submit information on electricity usage, real time whole-
10	sale and retail electric prices, voltage level, and disruptions on local
11	electric distribution networks;
12	(ii) allow for the integration of AMI to measure and transmit data on
13	consumer electric usage;
14	(iii) incorporate consumer products, including household appliances
15	and electric plug-in vehicles;
16	(iv) promote the use of distributed generation, including renewable
17	technologies; and
18	(v) protect the privacy of consumers and consumer usage data.
19	3. New York transmission and distribution coordinating council. With-
20	in one hundred eighty days of the effective date of this section the New
21	York transmission and distribution coordinating council shall be
22	created. Any reasonable costs associated with the functioning of the
23	committee shall be borne by the New York state energy research and
24	development authority. Within one hundred eighty days of the creation of
25	such council, the council shall submit to the commission a report iden-
26	tifying areas of concern within the state's high voltage transmission
27	system. Such report shall:
28	(a) locate and identify and propose upgrades or replacement of high
29	voltage transmission lines and/or components of the high voltage trans-
30	mission system that are in service as of the effective date of this
31	section;
32	(b) Identify equipment upgrades or installations that are necessary to
33	relieve areas of congestion within the high voltage transmission
34	network; and
35	(c) Provide a cost analysis of proposed high voltage transmission line
36	component upgrades or replacement over a ten-year period, which such
37	<u>cost analysis shall include:</u>
38	(i) a proposal for the cost sharing of proposed transmission upgrades
39	or replacement projects that directly or indirectly benefit customers in
40	the respective service territories of two or more electric transmission
41	and distribution companies;
42	(ii) strategies for attracting private investment for proposed trans-
43	mission upgrades or replacement projects identified in the report;
44	(iii) an analysis of the financial and other impacts of proposed tran-
45	smission upgrades or replacement projects on electric ratepayers; and
46	(iv) any other information, studies, maps or analyses the transmission
47	council deems necessary.
48	4. Commission review of smart grid advisory council report. (a) The
49	commission, thirty days upon receiving the "smart grid advisory council"
50	report pursuant to subdivision two of this section, shall determine the
51	reasonableness, efficacy and expense of the development of a ten year
52	statewide smart grid deployment by transmission and distribution compa-
53	nies and public power authorities. In making its determination the
54	commission shall consider whether smart grid deployment would serve the
55	public interest, with consideration of the impact on the safety and
56	reliability of local distribution networks, the retail cost of electric-

1	ity to residential, commercial and industrial customers and the security
2	and privacy of customer energy usage information and data.
3	(b) If the commission determines that smart grid deployment meets the
4	public interest it shall require, in its grid modernization order, made
5	pursuant to subdivision five of this section that transmission and
6	distribution companies invest in smart grid deployment.
7	(c) If the commission determines that smart grid deployment would not
8	meet the public interest for reasons specified in paragraph (a) of this
9	subdivision it shall provide a statement in its grid modernization
10	order, made pursuant to subdivision five of this section detailing the
11	reasons that smart grid deployment would not serve the public interest.
12	5. Commission grid modernization order. No later than two years
13	following the effective date of this section, the commission, after
14	consultation with the state energy planning board, established pursuant
15	to article six of the energy law, the New York transmission and distrib-
16	ution coordinating council and the smart grid advisory council, shall
17	approve an order approving a ten year grid modernization program to be
18	undertaken by transmission and distribution companies.
19	<u>(a) The order establishing the program shall include high voltage</u>
20	transmission system improvements, which shall include, where applicable,
21	but not be limited to, the replacement or upgrade of transmission facil-
22	ities or transmission lines, which, due to their years in service or
23	limited transfer capacity have created or have the potential to create
24	within ten years of the effective date of this section a significant
25	<u>electric system reliability problem, or as determined by the commission</u>
26	have contributed to a significant increase in the wholesale cost of
27	electricity. The commission shall not approve any proposal to invest in
28	new transmission facilities that would require the acquisition of
29	<u>substantial new rights of way. Any high voltage transmission system</u>
30	improvements ordered by the commission shall:
31	(i) encourage the interconnection of existing and proposed electric
32	generating facilities, with an emphasis on renewable energy technolo-
33	gies, including but not limited to solar and wind;
34	(ii) allow for the economic and cost-effective transmission of elec-
35	tricity from existing and proposed electric generating facilities
36	located in New York to energy intensive regions located within the elec-
37	tric transmission system operated by the bulk system operator serving
38	the state's electric system;
39	(iii) be sited only on existing transmission rights of way, provided
40	further that the acquisition of additional lands parallel to such rights
41	of way be minimal;
42	(iv) be designed to reduce susceptibility to power outages caused by
43	events such as storm-related damage including, but not limited to, high
44	winds, thunderstorms and ice storms; and
45	(v) meet any other standards for economy and reliability established
46	by the commission in developing its grid modernization program.
47	(b) The order establishing the program shall also include distribution
48	system improvements such as but not be limited to underground residen-
49 50	tial distribution cable injection and replacement, mainline cable system
50	refurbishment and replacement, wood utility pole inspection, treatment
51 52	and replacement, the replacement or relocation or underground conversion
52 52	of certain circuits or other similar measures to minimize outages caused
53 54	by damage to infrastructure and equipment that have been identified as
54 55	susceptible to damage from events such as storm-related damage, includ- ing, but not limited to, high winds, thunderstorms and ice storms.
55 56	Distribution system improvements made pursuant to this order shall:
50	DISCUIDATION SYSTEM IMPLOVEMENTS MADE PULSUANT TO THIS OLDER SHALL.

1	(i) be designed to reduce the susceptibility to electrical outages
2	including those caused by events such as storms;
3	(ii) where possible and practicable, be designed and located in a
4	manner that will reduce the reliance on utility right of way maintenance
5	practices including tree and brush cutting; and
6	(iii) where possible and practicable allow for and encourage the inte-
7	gration of AMI if the commission finds that it would be in the public
8	interest.
9	(c) The order establishing the program shall also include energy low-
10	income assistance and energy usage education, which shall include but
11	not be limited to:
12^{11}	(i) residential and non-residential and small business utility rate-
13	payer hardship programs;
14^{13}	(ii) grants and other payment concessions to disabled veterans,
15	defined as a veteran who has received a compensation rating from the
16	United States department of veterans affairs or from the United States
17	department of defense because of a service-connected disability incurred
18	in the line of duty in the active military, naval or air services who
19	demonstrate a hardship, a disabled veteran who became severely and
20	permanently disabled as a result of injury or illness suffered or
21	incurred during military training in preparation for duty in a combat
22	theater or combat zone of operations who demonstrate a hardship and
23	members of the armed services or a member of the national guard or
24	reserve as defined in 10 U.S.C. Section 101 (d) (1), or a member of the
25	state organized militia, and is called or ordered to active duty for the
26	state, as defined in subdivision one of section six of the military law
27	and who demonstrates a hardship; and
28	(iii) budget assistance programs that provide tools and education to
29	the general public with an emphasis on low-income customers and senior
29 30	the general public with an emphasis on low-income customers and senior citizens to assist them with obtaining information regarding energy
29 30 31	the general public with an emphasis on low-income customers and senior citizens to assist them with obtaining information regarding energy usage and effective means of managing energy costs.
29 30 31 32	the general public with an emphasis on low-income customers and senior citizens to assist them with obtaining information regarding energy usage and effective means of managing energy costs. (d) Energy low-income assistance and education programs made pursuant
29 30 31 32 33	the general public with an emphasis on low-income customers and senior citizens to assist them with obtaining information regarding energy usage and effective means of managing energy costs. (d) Energy low-income assistance and education programs made pursuant to this section shall be designed to reduce or prevent disconnection of
29 30 31 32 33 34	the general public with an emphasis on low-income customers and senior citizens to assist them with obtaining information regarding energy usage and effective means of managing energy costs. (d) Energy low-income assistance and education programs made pursuant to this section shall be designed to reduce or prevent disconnection of utility service to residential and non-residential customers due to any
29 30 31 32 33 34 35	the general public with an emphasis on low-income customers and senior citizens to assist them with obtaining information regarding energy usage and effective means of managing energy costs. (d) Energy low-income assistance and education programs made pursuant to this section shall be designed to reduce or prevent disconnection of utility service to residential and non-residential customers due to any potential increase in monthly utility bills. (e) If the commission determines that it is in the public interest, the order establishing the program shall also include smart grid deploy- ment. Smart grid infrastructure deployment made pursuant to this order shall: (i) be designed to allow for electric customers to obtain real-time retail electric pricing data and consumer demand data within their respective company's service territory through the installation of AMI, which may include smart meters or interactive consumer software and communications applications: (ii) protect customer privacy, including personal financial informa- tion and data relating to personal electric transmission and distribution company to, at no penalty, fee or service charge, to decline the permis- sion of his or her respective company to replace a current meter with an AMI device or install any AMI device at his or her property for the measurement of and storage of electric usage data; (iv) accommodate and encourage the use of smart appliances and plug-in or hybrid electric vehicles; and

(f) The order establishing the program shall also require electric and 1 2 transmission distribution companies to administer a workforce develop-3 ment program designed to ensure that each such company will recruit and 4 maintain adequate certified full-time and part-time employees and 5 contracted workers to carry out the requirements pursuant to paragraphs б (a), (b), and (c) of this subdivision. Workforce development program 7 made pursuant to this subdivision shall: 8 (i) Require each transmission and distribution company with annual 9 gross revenues in excess of two hundred million dollars to maintain, at 10 a minimum, one in-state training facility located within its respective 11 service territory for the purposes of providing full-time and part-time employees and contracted workers any necessary instruction and hands-on 12 training required for smart grid deployment made pursuant to this 13 14 section; (ii) Require each transmission and distribution company to create a 15 16 tuition and financial assistance fund with any monies made available pursuant to paragraph (d) of subdivision six of this section to cover 17 the costs of training prospective full-time and part-time employees 18 19 through state universities, community colleges, boards of cooperative 20 education and other entities accredited by the American National Stand-21 ards Institute. 22 (iii) Require each transmission and distribution company to develop workforce recruitment programs to ensure that each such company main-23 tains sufficient full-time and part-time employees to offset any poten-24 25 tial workforce reductions attributed to retirement. 26 6. Electric transmission and distribution company program plan. No 27 later than one year following the commission's grid modernization order, each electric transmission and distribution company shall file a program 28 29 plan for the purpose of complying with such order made pursuant to this 30 section. 31 (a) The commission shall approve each such plan, or may modify it as 32 it deems appropriate, if the commission finds that the plan would result 33 in achievement of the company's obligations, promotes the sustained and 34 orderly development of the statewide electric power grid, and protects 35 ratepayers from significant retail electric rate increases. The commission shall require each electric transmission and distribution company 36 to begin implementation of its grid modernization programs within three 37 38 hundred sixty-five days of its approval. 39 (b) The ten year plans submitted by the transmission and distribution companies pursuant to this subdivision shall be designed to include 40 annual investment targets; intervenor funds; rebates for households 41 42 eligible for energy low-income assistance; consumer education and work-43 force development; AMI deployment plans for customers with electricity demands less than 300 kilowatt hours; workforce and cyber security 44 45 systems to protect customer financial information and data relating to 46 personal electrical usage. 47 (c) The commission shall not approve a rate proposal due to expendi-48 tures made in order to comply with this section made by an electric transmission and distribution company if such proposal would increase 49 electric rates for customers above two and one-half percent. In the 50 51 event that such cap would be exceeded, the commission may, in its discretion order a transmission and distribution company to reduce 52 53 expenditures in the following reporting year to a level sufficient for 54 achieving grid modernization benchmarks without significant impact to

55 <u>ratepayers</u>.

1	(d) The commission shall propertionally quadit and make evolution
1	(d) The commission shall proportionally credit and make available
2	funds for the purposes of creating a fund for tuition and financial
3	assistance as required by subparagraph (ii) of paragraph (f) of subdivi-
4	sion five of this section from assessments on transmission and distrib-
5	ution companies under direct oversight of the commission collected on or
б	after July first, two thousand ten for the purpose of funding electric
7	utility public benefit programs, including, but not limited to, energy
8	efficiency and energy conservation programs, other energy technology and
9	education programs and any interest earned by the fund.
10	7. No later than July first, two thousand twenty-four, and every two
11	years thereafter, the commission shall, after notice and provision for
12	the opportunity for public comment, issue a comprehensive review of the
13	program established pursuant to this section. The commission shall
14	determine, among other matters:
15	(a) the progress of each transmission and distribution company in
16	meeting its obligations pursuant to this act and progress in meeting the
17	overall annual targets for modernization; and
18	(b) annual commitments and expenditures. The commission shall evaluate
19	the reasonableness of the any modifications to its grid modernization
20	order.
21	§ 5. Section 66 of the public service law is amended by adding a new
22	subdivision 29 to read as follows:
23	29. (a) Each electric and gas corporation with annual gross revenues
24	in excess of two hundred million dollars shall not employ or otherwise
25	contract for the services of a lineworker, utility substation techni-
26	cian, relay technician, engineering technician, alternative fuel techni-
27	cian, meter technician, natural gas technician, gas service technician,
28	corrosion technician, generation instrument and control technician,
29	mechanical technician, electrical technician, auxiliary equipment opera-
30	tor, plant operator, radiation protection technician, unless the person
31	meets one of the following:
32	(i) has successfully completed an educational program and holds and
33	maintains a certificate administered by an American National Standards
34	Institute (ANSI) accredited Center for Energy Workforce Development
35	(CEWD) Energy Industry Fundamentals Approved Course Provider;
36	(ii) has completed an appropriate training program in the United
37	States Army, Navy, Air Force, Marine Corps that is comparable to train-
38	ing provided by the entities listed in subparagraph (i) of this para-
39	graph;
40	(iii) was employed by an electric and gas corporation to perform the
41	duties related to services required of one or more of the positions
42	identified in this paragraph on or in the two years immediately prior to
43	the effective date of this paragraph; or
44	(iv) is in the service of an agency or department of the federal
44 45	government, to the extent the person is performing services comparable
46	to the positions listed in this paragraph.
47	A person may be employed or contracted by an electric or gas corpo-
48	ration to perform the duties related to services required of one or more
49	of the positions identified in this paragraph during the twelve month
50	period immediately following successful completion of an educational
51	program under subparagraph (i) of this paragraph, but may not continue
52	to be employed or contracted with beyond that period without documenta-
53	tion that the employee or contracted worker holds and maintains the
54	certification required in subparagraph (i) of this paragraph.
- -	
55 56	(b) A person who qualifies to perform the duties related to services required of one or more of the positions identified in paragraph (a) of

this subdivision must annually complete at least thirty-five hours of
continuing education to remain qualified to be employed or contracted
with for such services by an electric and gas corporation. Any expenses
associated with the continuing education requirements of this subpara-
graph shall be the responsibility of the employer.
§ 6. Section 1005 of the public authorities law is amended by adding a
new subdivision 28 to read as follows:
28. Establishment of grid modernization program. 1. Definitions. As
used in this section:
(a) "Electric transmission and distribution company" or "transmission
and distribution company" shall be known as an investor-owned utility
having annual revenues in excess of two hundred million dollars that
transmits and distributes electricity within this state or a munici-
pality that distributes electricity and receives less than its entire
electric supply from the power authority of the state of New York and is
subject to the jurisdiction of the commission with respect to the requ-
lation of the price of electricity.
(b) "Full load municipal electric customer" shall be known as a muni-
cipality that distributes electricity and receives its entire electric
supply from the power authority of the state of New York.
(c) "Cooperative" shall have the same meaning as such term is defined
in subdivision (a) of section two of the rural electric cooperative law.
(d) "Public power authorities" shall be known as the power authority
of the state of New York and the Long Island power authority.
(e) "New York transmission and distribution coordinating council" or
"transmission council" shall be known as a consortium which shall be
formed pursuant to subdivision three of section sixty-six-q of the
public service law for the purpose of identifying areas of electrical
congestion within New York's high voltage transmission system compris-
ing:
(i) Consolidated Edison, Orange and Rockland Utilities, Central Hudson
Gas and Electric, Niagara Mohawk d/b/a National Grid, New York State
Electric and Gas and Rochester Gas and Electric;
(ii) Public power authorities; and
(iii) the New York state energy research and development authority.
(f) "New York's high voltage transmission system" or "high voltage
transmission system" shall mean electric transmission lines as referred
to in paragraph (a) of subdivision two of section one hundred twenty of
the public service law, provided that electric transmission lines shall
also include electric transmission lines located wholly underground in a
city in excess of one hundred twenty-five thousand persons or a primary
transmission line approved by the federal energy regulatory commission
in connection with a hydro-electric facility and other equipment neces-
sary for electric transmission.
<u>sary for electric transmission.</u>

45 'Smart grid" shall be known as investments and policies that <u>(q)</u> 46 together promote one or more of the following goals:

47	<u>(i)</u>	Increased	use	<u>of digi</u>	tal	<u>information</u>	and	controls	technology	· to
48	improve	reliabili	ty, s	ecurity	and	efficiency of	of th	ne electr	ic grid;	

49 (ii) Dynamic optimization of grid operations and resources, with full 50 cyber security;

51	<u>(iii)</u>	Deployment	and	<u>integration</u>	<u>of</u>	distributed	resources	and	gener-
52	<u>ation, i</u>	including ren	<u>ewabl</u>	e resources;					-

53 (iv) Development and incorporation of demand-response, demand-side 54 resources, and energy efficiency resources;

(v) Deployment of "smart" technologies, real-time, automated, interac-55 56 tive technologies that optimize the physical operation of appliances and

1	consumer devices for metering, communications concerning grid operations
2	and status, and distribution automation;
3	(vi) Integration of "smart" appliances and consumer devices;
4	(vii) Deployment and integration of advanced electricity storage and
5	peak-shaving technologies, including plug-in electric and hybrid elec-
б	tric vehicles, thermal-storage air conditioning and renewable energy
7	generation;
8	(viii) Provision to consumers of timely information and control
9	options;
10	(ix) Development of open access standards for communication and inter-
11	operability of appliances and equipment connected to the electric grid,
12	including the infrastructure serving the grid;
13	(x) Identification and lowering of unreasonable or unnecessary barri-
14	ers to adoption of smart grid technologies, practices, services, and
15	business models that support energy efficiency, demand-response, and
16	distributed generation; and
17	(xi) Advanced metering infrastructure.
18	(h) "Advanced metering infrastructure" or "AMI" shall be known as the
19	communications hardware and software and associated system software that
20	is designed to create a network between advanced meters and electric
21	transmission and distribution company systems and allow for collection
22	and distribution of information to customers and other authorized
23	parties in addition to providing information to transmission and
24	distribution companies.
25	(i) "Smart grid advisory council" means the group of stakeholders
26	formed pursuant to paragraph (a) of subdivision two of section sixty-
27	six-q of the public service law for purposes of advising and working
28	with the public service commission to determine the feasibility of the
29	development and implementation of a smart grid advanced metering infras-
30	tructure deployment plan.
31	(j) "Workforce development" shall mean training initiatives and
32	curriculum sponsored by transmission and distribution companies and
33	public power authorities that will ensure sufficient staffing to imple-
34	ment the grid modernization programs. Such workforce development
35	
36	programs shall be undertaken through partnerships with state universi-
	programs shall be undertaken through partnerships with state universi- ties, community colleges, boards of cooperative education and other
	ties, community colleges, boards of cooperative education and other
37	ties, community colleges, boards of cooperative education and other entities accredited by the American National Standards Institute for the
37 38	ties, community colleges, boards of cooperative education and other entities accredited by the American National Standards Institute for the purposes of implementing grid modernization programs.
37 38 39	ties, community colleges, boards of cooperative education and other entities accredited by the American National Standards Institute for the purposes of implementing grid modernization programs. (k) "Commission" shall mean the New York Public Service Commission.
37 38 39 40	ties, community colleges, boards of cooperative education and other entities accredited by the American National Standards Institute for the purposes of implementing grid modernization programs. (k) "Commission" shall mean the New York Public Service Commission. 2. No later than two years after the effective date of this section,
37 38 39 40 41	ties, community colleges, boards of cooperative education and other entities accredited by the American National Standards Institute for the purposes of implementing grid modernization programs. (k) "Commission" shall mean the New York Public Service Commission. 2. Such program shall consist of: (a) High voltage transmission system improvements, including but not limited to the replacement or upgrade of transmission facilities and/or transmission lines, which, due to their years in service or limited transfer capacity have created or are projected to create within ten
37 38 39 40 41 42 43 445 46 47 489 512 53	ties, community colleges, boards of cooperative education and other entities accredited by the American National Standards Institute for the purposes of implementing grid modernization programs. (k) "Commission" shall mean the New York Public Service Commission. 2. No later than two years after the effective date of this section, the authority, after consultation with the commission, the New York transmission and distribution coordinating council and the smart grid advisory council, shall approve a ten year grid modernization program. The authority may collaborate with one or more transmission and distrib- ution companies. The program established by the authority shall incorpo- rate, where feasible and practicable, full load municipal electric customers. Such program shall consist of: (a) High voltage transmission system improvements, including but not limited to the replacement or upgrade of transmission facilities and/or transmission lines, which, due to their years in service or limited transfer capacity have created or are projected to create within ten years of the effective date of this act a significant electric system reliability problem, or as determined by the commission have contributed

1	of way. High voltage transmission system improvements made by the
2	authority pursuant to this section shall:
3	(i) encourage the interconnection of existing and proposed electric
4	generating facilities, with an emphasis on renewable energy technolo-
5	gies, including but not limited to solar and wind;
б	(ii) allow for the economic and cost-effective transmission of elec-
7	tricity from existing and proposed electric generating facilities
8	located in New York to energy intensive regions located within the elec-
9	tric transmission system operated by the bulk system operator serving
10	the state's electric system;
11	(iii) be sited only on existing transmission rights of way, provided
12	further that the acquisition of additional lands parallel to such rights
13	of way be minimal;
14	(iv) be designed to reduce susceptibility to power outages caused by
15	events such as storm-related damage including, but not limited to, high
16	winds, thunderstorms and ice storms; and
17	(v) meet any other standards for economy and reliability established
18	by the commission in developing its grid modernization program pursuant
19	to subdivision five of section sixty-six-q of the public service law.
20	(b) Distribution system infrastructure improvements, which shall
21	include, where applicable, but not be limited to underground residential
22	distribution cable injection and replacement, mainline cable system
23	refurbishment and replacement, wood utility pole inspection, the
24	replacement or relocation or underground conversion of certain circuits
25	which have been identified by the commission as susceptible to outages
26	or service disruption by events such as storm-related damage, including,
27	but not limited to, high winds, thunderstorms and ice storms. Distrib-
28	ution system improvements made by the authority pursuant to this act
29	shall:
30	(i) be designed to reduce the susceptibility to electrical outages
31	including those caused by events such as storms;
32	(ii) where possible and practicable, be designed and located in a
33	manner that will reduce the reliance on utility right of way maintenance
34	practices including tree and brush cutting; and
35	(iii) where possible and practicable allow for and encourage the inte-
36	gration of AMI.
37	(c) Energy low-income assistance and energy usage education, which
38	shall include, where applicable, but not be limited to:
39	(i) residential and non-residential and small business utility rate-
40	payer hardship programs;
41	(ii) grants and other payment concessions to disabled veterans,
42	defined as a veteran who has received a compensation rating from the
43	United States department of veterans affairs or from the United States
44 45	department of defense because of a service-connected disability incurred
45	in the line of duty in the active military, naval or air services who
46	demonstrate a hardship, a disabled veteran who became severely and permanently disabled as a result of injury or illness suffered or
47 10	incurred during military training in preparation for duty in a combat
48 49	theater or combat zone of operations who demonstrate a hardship and
49 50	members of the armed services or a member of the national quard or
50 51	reserve as defined in 10 U.S.C. Section 101 (d) (1), or a member of the
51 52	state organized militia, and is called or ordered to active duty for the
52 53	state, as defined in subdivision one of section six of the military law
53	and who demonstrates a hardship; and
55	(iii) budget assistance programs that provide tools and education to
56	authority customers with an emphasis on low-income customers and senior
~ ~	

1	citizens to assist them with obtaining information regarding energy
2	usage and effective means of managing energy costs.
3	(d) Energy low-income assistance and education programs made pursuant
4	to this section shall be designed to reduce or prevent disconnection of
5	utility service to residential and non-residential customers due to any
6	potential increase in monthly utility bills.
7	(e) Smart grid deployment, if determined feasible and advisable by the
8	trustees, which will provide customers with the technological and educa-
9	tional resources to match personal energy usage to periods of reduced or
10	low electric demand within their respective company's service territory.
11	Smart grid infrastructure deployment made pursuant to this section
12	shall:
13	(i) be designed to allow for electric customers to obtain real-time
14	retail electric pricing data and consumer demand data within the author-
15	ity's service territory through the installation of AMI, which may
16	include smart meters or interactive consumer software and communications
17	applications;
18	(ii) protect customer privacy, including personal financial informa-
19	tion and data relating to personal electrical usage;
20	(iii) allow any customer of the authority, at no penalty, fee or
21	service charge, to decline the permission of the authority to replace a
22	current meter with an AMI device or install any AMI device at his or her
23	property for the measurement of and storage of electric usage data;
24	(iv) accommodate and encourage the use of smart appliances and plug-in
25	or hybrid electric vehicles; and
26	(v) include initiatives to educate consumers on the proper usage of
20 27	technologies with the aim of promoting system-wide reduction of peak
28	
	energy usage.
29	(f) The grid modernization program developed by the authority shall
30	ensure that the authority will recruit and maintain adequate certified
31	full-time and part-time employees and contracted workers to carry out
32	the requirements pursuant to paragraphs (a), (b) and (e) of this subdi-
33 24	vision. Workforce development programs made pursuant to this subdivi-
34 25	sion shall:
35	(i) Require the authority to maintain at a minimum, one instate train-
36	ing facility for the purposes of providing full-time, part-time employ-
37	ees and contracted workers any necessary instruction and hands-on train-
38	ing required for smart grid deployment made pursuant to this section;
39	(ii) Require the authority to create a tuition and financial assist-
40	ance fund to cover the costs of training prospective full-time and part-
41	time employees and contracted workers through state universities, commu-
42	nity colleges, boards of cooperative education and other entities
43	accredited by the American National Standards Institute;
44	(iii) Require the authority to develop workforce recruitment programs
45	to ensure that it maintains sufficient full-time and part-time employees
46	to offset any potential workforce reductions attributable to retirement.
47	3. The grid modernization program shall promote the sustained and
48	orderly development of the statewide electric power grid and protect
49	ratepayers from significant retail electric price increases. The author-
50	ity's grid modernization program shall:
51	(a) be designed to include a ten year grid modernization strategy with
52	annual investment targets; rebates for households eligible for energy
53	low-income assistance; consumer education and workforce development
54	plans; advanced meter infrastructure deployment plans for customers with
55	electricity demands less than three hundred kilowatt hours; workforce

1	development, and cyber security systems to protect customer financial
2	information and data relating to personal electrical usage.
3	(b) The total expenditures undertaken by the authority for capital
4	investments undertaken pursuant to this section shall not increase elec-
5	tric rates for authority customers above two and one-half percent. In
6	the event that such cap would be exceeded, the authority may as deemed
7	feasible and advisable by the trustees, reduce expenditures in the
8	following reporting year to a level sufficient for achieving grid
9	modernization benchmarks without significant impact to ratepayers.
10	(c) No later than July first, two thousand twenty-three, and every two
11	years thereafter, the authority shall submit to the governor, the tempo-
12	rary president of the senate, the speaker of the assembly, the chair of
13	the senate committee on energy and telecommunications and the chair of
14	the assembly committee on energy a comprehensive review of the program
15	established pursuant to this section. The report, among other matters
16	shall contain:
17	(i) an analysis of the authority's progress meeting obligations pursu-
18	ant to this act and progress in meeting the overall annual targets for
19	modernization; and
20	(ii) annual commitments and expenditures.
21	§ 7. Sections 1020-jj, 1020-kk and sections 1020-ll of the public
22	authorities law, sections 1020-jj, 1020-kk and 1020-ll as renumbered by
23	chapter 520 of the laws of 2018, and section 1020-ll as renumbered by
24	chapter 415 of the laws of 2017, are renumbered sections 1020-kk, 1020-
25	11, 1020-mm and 1020-nn and a new section 1020-jj is added to read as
26	follows:
27	<u>§ 1020-jj. Establishment of grid modernization program. 1. Defi-</u>
28	nitions. As used in this section:
29	(a) "Electric transmission and distribution company" or "transmission
30	and distribution company" shall be known as an investor-owned utility
31	having annual revenues in excess of two hundred million dollars that
32	transmits and distributes electricity within this state or a munici-
33	pality that distributes electricity and receives less than its entire
34	electric supply from the power authority of the state of New York and is
35	subject to the jurisdiction of the commission with respects to the regu-
36	lation of the price of electricity.
37	(b) "Full load municipal electric customer" shall be known as a muni-
38	cipality that distributes electricity and receives its entire electric
39	supply from the power authority of the state of New York.
40	(c) "Cooperative" shall have the same meaning as such term is defined
41	in subdivision (a) of section two of the rural electric cooperative law.
42	(d) "Public power authorities" shall be known as the power authority
43	of the state of New York and the Long Island power authority.
44	(e) "New York transmission and distribution coordinating council" or
45	"transmission council" shall be known as a consortium which shall be
46	formed pursuant to subdivision three of section sixty-six-q of the
47	public service law for the purpose of identifying areas of electrical
48	congestion within New York's high voltage transmission system compris-
49	ing:
50	(i) Consolidated Edison, Orange and Rockland Utilities, Central Hudson
51 52	Gas and Electric, Niagara Mohawk d/b/a National Grid, New York State
52 53	Electric and Gas and Rochester Gas and Electric;
	(ii) Public power authorities; and (iii) the New York state energy research and development authority.
54 55	(f) "New York's high voltage transmission system" or "high voltage
55 56	(I) "New York's high voltage transmission system" or "high voltage transmission system" shall mean electric transmission lines as referred
56	CLANSMISSION SYSTEM SHALL MEAN ELECTIC CLANSMISSION TIMES AS FELETIED

to in paragraph (a) of subdivision two of section one hundred twenty of
the public service law, provided that electric transmission lines shall
also include electric transmission lines located wholly underground in a
city in excess of one hundred twenty-five thousand persons or a primary
transmission line approved by the federal energy regulatory commission
in connection with a hydro-electric facility and other equipment neces-
sary for electric transmission.
(g) "Smart grid" shall be known as investments and policies that
together promote one or more of the following goals:
(i) Increased use of digital information and controls technology to
improve reliability, security and efficiency of the electric grid;
(ii) Dynamic optimization of grid operations and resources, with full
<u>cyber security;</u>
(iii) Deployment and integration of distributed resources and gener-
ation, including renewable resources;
(iv) Development and incorporation of demand-response, demand-side
resources, and energy efficiency resources;
(v) Deployment of "smart" technologies, real-time, automated, interac-
tive technologies that optimize the physical operation of appliances and
consumer devices for metering, communications concerning grid operations
and status, and distribution automation;
(vi) Integration of "smart" appliances and consumer devices;
(vii) Deployment and integration of advanced electricity storage and
peak-shaving technologies, including plug-in electric and hybrid elec-
tric vehicles, thermal-storage air conditioning and renewable energy
generation;
(viii) Provision to consumers of timely information and control
options;
(ix) Development of open access standards for communication and inter-
operability of appliances and equipment connected to the electric grid,
operability of appliances and equipment connected to the electric grid, including the infrastructure serving the grid;
including the infrastructure serving the grid;
including the infrastructure serving the grid; (x) Identification and lowering of unreasonable or unnecessary barri- ers to adoption of smart grid technologies, practices, services, and
including the infrastructure serving the grid; (x) Identification and lowering of unreasonable or unnecessary barri-
<pre>including the infrastructure serving the grid; (x) Identification and lowering of unreasonable or unnecessary barri- ers to adoption of smart grid technologies, practices, services, and business models that support energy efficiency, demand-response, and distributed generation; and</pre>

(i) "Smart grid advisory council" means the group of stakeholders</pre>

48 development and implementation of a smart grid advanced metering infras49 tructure deployment plan.
50 (j) "Workforce development" shall mean training initiatives and
51 curriculum sponsored by transmission and distribution companies and
52 public power authorities that will ensure sufficient staffing to imple-

52 public power authorities that will ensure sufficient staffing to imple-53 ment the grid modernization programs. Such workforce development 54 programs shall be undertaken through partnerships with state universi-

55 ties, community colleges, boards of cooperative education and other

-	
1	entities accredited by the American National Standards Institute for the
2	purposes of implementing grid modernization programs.
3	(k) "Commission" shall mean the New York public service commission.
4	2. No later than two years after the effective date of this section,
5	the authority, after consultation with the commission, the New York
6	transmission and distribution coordinating council and the smart grid
7	advisory council, shall approve a ten year grid modernization program.
8	The authority may collaborate with one or more transmission and distrib-
9	ution companies. The program established by the authority shall incorpo-
10	rate, where feasible and practicable, full load municipal electric
11	customers. Such program shall consist of:
12	(a) High voltage transmission system improvements, including but not
	be limited to the replacement or upgrade of transmission facilities
13	
14	and/or transmission lines, which, due to their years in service or
15	limited transfer capacity have created or are projected to create within
16	ten years of the effective date of this section a significant electric
17	system reliability problem, or as determined by the commission have
18	contributed to a significant increase in the wholesale cost of electric-
19	ity. The authority shall not develop any plan to invest in new trans-
20	mission facilities that would require the acquisition of substantial new
21	rights of way. High voltage transmission system improvements made by
22	the authority pursuant to this section shall:
23	(i) encourage the interconnection of existing and proposed electric
24	generating facilities, with an emphasis on renewable energy technolo-
25	gies, including but not limited to solar and wind;
26	(ii) allow for the economic and cost-effective transmission of elec-
27	tricity from existing and proposed electric generating facilities
28	located in New York to energy intensive regions located within the elec-
29	tric transmission system operated by the bulk system operator serving
30	the state's electric system;
31	(iii) be sited only on existing transmission rights of way, provided
32	further that the acquisition of additional lands parallel to such rights
33	of way be minimal;
34	(iv) be designed to reduce susceptibility to power outages caused by
35	events such as storm-related damage including, but not limited to, high
36	winds, thunderstorms and ice storms; and
37	(v) meet any other standards for economy and reliability established
38	by the commission in developing its grid modernization program pursuant
39	to subdivision five of section sixty-six-q of the public service law.
40	(b) Distribution system infrastructure improvements, which shall
41	include, where applicable, but not be limited to underground residential
42	distribution cable injection and replacement, mainline cable system
43	refurbishment and replacement, wood utility pole inspection, the
44	replacement or relocation or underground conversion of certain circuits
45	which have been identified by the commission as susceptible to outages
46	or service disruption by events such as storm-related damage, including,
47	but not limited to, high winds, thunderstorms and ice storms. Distrib-
48	ution system improvements made by the authority pursuant to this section
49	shall:
49 50	(i) be designed to reduce the susceptibility to electrical outages
51	including those caused by events such as storms;
52	(ii) where possible and practicable, be designed and located in a
53	manner that will reduce the reliance on utility right of way maintenance
54	practices including tree and brush cutting; and
55	(iii) where possible and practicable allow for and encourage the inte-

56 gration of AMI.

1	(c) Energy low-income assistance and energy usage education, which
2	shall include, where applicable, but not be limited to:
3	(i) residential and non-residential and small business utility rate-
4	<u>payer hardship programs;</u>
5	(ii) grants and other payment concessions to disabled veterans,
6	defined as a veteran who has received a compensation rating from the
7	United States department of veterans affairs or from the United States
8	department of defense because of a service-connected disability incurred
9	in the line of duty in the active military, naval or air services who
10	demonstrate a hardship, a disabled veteran who became severely and
11	permanently disabled as a result of injury or illness suffered or
12	incurred during military training in preparation for duty in a combat
13	theater or combat zone of operations who demonstrate a hardship and
14	members of the armed services or a member of the national guard or
15	reserve as defined in 10 U.S.C. Section 101 (d) (1), or a member of the
16	state organized militia, and is called or ordered to active duty for the
17	state, as defined in subdivision one of section six of the military law
18	and who demonstrates a hardship; and
19	(iii) budget assistance programs that provide tools and education to
20	authority customers with an emphasis on low-income customers and senior
21	citizens to assist them with obtaining information regarding energy
22	usage and effective means of managing energy costs.
23	(d) Energy low-income assistance and education programs made pursuant
24	to this section shall be designed to reduce or prevent disconnection of
25	utility service to residential and non-residential customers due to any
26	potential increase in monthly utility bills.
27	(e) Smart grid deployment, if determined feasible and advisable by the
28	trustees, which will provide customers with the technological and educa-
29	tional resources to match personal energy usage to periods of reduced or
30	low electric demand within their respective company's service territory.
31	Smart grid infrastructure deployment made pursuant to this section
32	shall:
33	(i) be designed to allow for electric customers to obtain real-time
34	retail electric pricing data and consumer demand data within the author-
35	ity's service territory through the installation of AMI, which may
36	include smart meters or interactive consumer software and communications
37	applications;
38	(ii) protect customer privacy, including personal financial informa-
39	tion and data relating to personal electrical usage;
40	(iii) allow any customer of the authority, at no penalty, fee or
41	service charge, to decline the permission of the authority to replace a
42	current meter with an AMI device or install any AMI device at his or her
43	property for the measurement of and storage of electric usage data;
44	(iv) accommodate and encourage the use of smart appliances and plug-in
45	or hybrid electric vehicles; and
46	(v) include initiatives to educate consumers on the proper usage of
47	technologies with the aim of promoting system-wide reduction of peak
48	energy usage.
49	(f) The grid modernization program developed by the authority shall
50	ensure that the authority will recruit and maintain adequate certified
51	full-time and part-time employees and contracted workers to carry out
52	the requirements pursuant to paragraphs (a), (b) and (e) of this subdi-
53	vision. Workforce development programs made pursuant to this subdivi-
53 54	sion shall:
54 55	
	(i) Require the authority to maintain at a minimum, one instate train-
56	ing facility for the purposes of providing full-time, part-time employ-

1	ees and contracted workers any necessary instruction and hands-on train-
2	ing required for smart grid deployment made pursuant to this section;
3	(ii) Require the authority to create a tuition and financial assist-
4	ance fund to cover the costs of training prospective full-time and part-
5	time employees and contracted workers through state universities, commu-
6	nity colleges, boards of cooperative education and other entities
7	accredited by the American National Standards Institute;
8	(iii) Require the authority to develop workforce recruitment programs
9	to ensure that it maintains sufficient full-time and part-time employees
10	to offset any potential workforce reductions attributable to retirement.
11	3. The grid modernization program shall promote the sustained and
12	orderly development of the statewide electric power grid and protect
13	ratepayers from significant retail electric price increases. The author-
14	ity's grid modernization program shall:
15	(a) be designed to include a ten year grid modernization strategy with
16	annual investment targets; rebates for households eligible for energy
17	low-income assistance; consumer education and workforce development
18	plans; advanced meter infrastructure deployment plans for customers with
19	electricity demands less than three hundred kilowatt hours; workforce
20	development, and cyber security systems to protect customer financial
21	information and data relating to personal electrical usage.
22	(b) The total expenditures undertaken by the authority for capital
23	investments undertaken pursuant to this section shall not increase elec-
24	tric rates for authority customers above two and one-half percent. In
25	the event that such cap would be exceeded, the authority may as deemed
26	feasible and advisable by the trustees, reduce expenditures in the
27	following reporting year to a level sufficient for achieving grid
28	modernization benchmarks without significant impact to ratepayers.
29	(c) No later than July first, two thousand twenty-three, and every two
30	years thereafter, the authority shall submit to the governor, the tempo-
31	rary president of the senate, the speaker of the assembly, the chair of
32	the senate committee on energy and telecommunications and the chair of
33	the assembly committee on energy a comprehensive review of the program
34	established pursuant to this section. The report, among other matters
35	shall contain:
36	(i) an analysis of the authority's progress meeting obligations pursu-
37	ant to this act and progress in meeting the overall annual targets for
38	modernization; and
39	(ii) annual commitments and expenditures.
40	§ 8. Article 7 of the rural electric cooperative law is renumbered
41	article 8 and sections 70, 71 and 72 of such law are renumbered sections
42	80, 81 and 82.
43	§ 9. The rural electric cooperative law is amended by adding a new
44	article 7 to read as follows:
45	ARTICLE 7
46	ESTABLISHMENT OF GRID MODERNIZATION PROGRAM
47	Section 70. Establishment of grid modernization program.
48	§ 70. Establishment of grid modernization program. 1. Definitions. As
49	used in this section:
50	(a) "Electric transmission and distribution company" or "transmission
51	and distribution company" shall be known as an investor-owned utility
52	having annual revenues in excess of two hundred million dollars that
53	transmits and distributes electricity within this state or a munici-
54	pality that distributes electricity and receives less than its entire
55	electric supply from the power authority of the state of New York and is

1	subject to the jurisdiction of the commission with respect to the regu-
2	lation of the price of electricity.
3	(b) "Full load municipal electric customer" shall be known as a muni-
4	cipality that distributes electricity and receives its entire electric
5	supply from the power authority of the state of New York.
6	(c) "Public power authorities" shall be known as the power authority
7	of the state of New York and the Long Island power authority.
8	(d) "New York transmission and distribution coordinating council" or
9	"transmission council" shall be known as a consortium which shall be
10	formed pursuant to subdivision three of section sixty-six-q of the
11	public service law for the purpose of identifying areas of electrical
12	congestion within New York's high-voltage transmission system compris-
13	ing:
14	(i) Consolidated Edison, Orange and Rockland Utilities, Central Hudson
15	Gas and Electric, Niagara Mohawk d/b/a National Grid, New York State
16	Electric and Gas and Rochester Gas and Electric;
17	(ii) Public power authorities; and
18	(iii) The New York State Energy Research and Development Authority.
19	<u>(e) "New York's high voltage transmission system" or "high voltage</u>
20	transmission system" shall mean electric transmission lines as referred
21	to in paragraph (a) of subdivision two of section one hundred twenty of
22	the public service law, provided that electric transmission lines shall
23	also include electric transmission lines located wholly underground in a
24	city in excess of one hundred twenty-five thousand persons or a primary
25	transmission line approved by the federal energy regulatory commission
26	in connection with a hydro-electric facility and other equipment neces-
27	<u>sary for electric transmission.</u>
28	(f) "Smart grid" shall be known as investments and policies that
29	together promote one or more of the following goals:
30	(i) Increased use of digital information and controls technology to
31	improve reliability, security and efficiency of the electric grid;
32	(ii) Dynamic optimization of grid operations and resources, with full
33	cyber security;
34	(iii) Deployment and integration of distributed resources and gener-
35	ation, including renewable resources;
36	(iv) Development and incorporation of demand-response, demand-side
37	resources, and energy efficiency resources;
38	(v) Deployment of "smart" technologies, real-time, automated, interac-
39	tive technologies that optimize the physical operation of appliances and
40	consumer devices for metering, communications concerning grid operations
41	and status, and distribution automation;
42	(vi) Integration of "smart" appliances and consumer devices;
43	(vii) Deployment and integration of advanced electricity storage and
44	peak-shaving technologies, including plug-in electric and hybrid elec-
45	tric vehicles, thermal-storage air conditioning and renewable energy
46	generation;
47	(viii) Provision to consumers of timely information and control
48	options;
49	(ix) Development of open access standards for communication and inter-
50	operability of appliances and equipment connected to the electric grid,
51	including the infrastructure serving the grid;
52	(x) Identification and lowering of unreasonable or unnecessary barri-
53	ers to adoption of smart grid technologies, practices, services, and
54	business models that support energy efficiency, demand-response, and
55	<u>distributed generation; and</u> (xi) Advanced Metering Infrastructure.
56	

1 (q) "Advanced Metering Infrastructure" or "AMI" shall be known as the 2 communications hardware and software and associated system software that 3 is designed to create a network between advanced meters and electric 4 transmission and distribution company systems and allow for collection 5 and distribution of information to customers and other authorized б parties in addition to providing information to transmission and 7 distribution companies. (h) "Smart Grid advisory council" means the group of stakeholders 8 9 formed pursuant to paragraph (a) of subdivision two of section sixty-10 six-q of the public service law for purposes of advising and working with the public service commission to determine the feasibility of the 11 development and implementation of a smart grid advanced metering infras-12 13 tructure deployment plan. 14 (i) "Workforce development" shall mean training initiatives and curriculum sponsored by transmission and distribution companies and 15 16 public power authorities that will ensure sufficient staffing to imple-17 ment the grid modernization programs. Such workforce development programs shall be undertaken through partnerships with state universi-18 19 ties, community colleges, boards of cooperative education and other 20 entities accredited by the American National Standards Institute for the 21 purposes of implementing grid modernization programs. (j) "Commission" shall mean the New York Public Service Commission. 22 23 2. No later than two years after the effective date of this section, each cooperative operating in New York, after consultation with the 24 commission, the New York transmission and distribution coordinating 25 26 council and the smart grid advisory council, shall approve a ten year 27 grid modernization program, provided that such program is consistent with any federal law, rule or regulation applicable to cooperatives. 28 29 Said cooperatives may collaborate with one or more transmission and 30 distribution companies or public power authorities in administering its 31 program. The program established by each cooperative shall consist of: 32 (a) High voltage transmission system improvements, including but not limited to the replacement or upgrade of transmission facilities and/or 33 transmission lines, which, due to their years in service or limited 34 35 transfer capacity have created or are projected to create within ten years of the effective date of this article a significant electric 36 system reliability problem, or as determined by the commission have 37 contributed to a significant increase in the wholesale cost of electric-38 ity. A cooperative shall not develop any plan to invest in new trans-39 mission facilities that would require the acquisition of substantial new 40 41 rights of way. High voltage transmission system improvements made by 42 the authority pursuant to this section shall: 43 (i) encourage the interconnection of existing and proposed electric 44 generating facilities, with an emphasis on renewable energy technolo-45 gies, including but not limited to solar and wind; 46 (ii) allow for the economic and cost-effective transmission of elec-47 tricity from existing and proposed electric generating facilities located in New York to energy intensive regions located within the elec-48 tric transmission system operated by the bulk system operator serving 49 the state's electric system; 50 51 (iii) be sited only on existing transmission rights of way, provided 52 further that the acquisition of additional lands parallel to such rights 53 of way be minimal; 54 (iv) be designed to reduce susceptibility to power outages caused by 55 events such as storm-related damage including, but not limited to, high 56 winds, thunderstorms and ice storms; and

1	(v) meet any other standards for economy and reliability established
2	by the commission in developing its grid modernization program pursuant
3	to subdivision five of section sixty-six-q of the public service law.
4	(b) Distribution system infrastructure improvements, which shall
5	include, where applicable, but not be limited to underground residential
б	distribution cable injection and replacement, mainline cable system
7	refurbishment and replacement; wood utility pole inspection, the
8	replacement or relocation or underground conversion of certain circuits
9	which have been identified by the commission as susceptible to outages
10	or service disruption by events such as storm-related damage, including,
11	but not limited to, high winds, thunderstorms and ice storms. Distrib-
12	ution system improvements made by a cooperative pursuant to this act
13	shall:
14	(i) be designed to reduce the susceptibility to electrical outages
15	including those caused by events such as storms;
16	(ii) where possible and practicable, be designed and located in a
17	manner that will reduce the reliance on utility right of way maintenance
18	practices including tree and brush cutting; and
19	(iii) where possible and practicable allow for and encourage the inte-
20	gration of AMI.
21	(c) Energy low-income assistance and energy usage education, which
22	shall include, where applicable, but not be limited to:
23	(i) residential and non-residential and small business utility rate-
24	payer hardship programs;
25	(ii) grants and other payment concessions to disabled veterans,
26	defined as a veteran who has received a compensation rating from the
27	United States department of veterans affairs or from the United States
28	department of defense because of a service-connected disability incurred
29	in the line of duty in the active military, naval or air services who
30	demonstrate a hardship, a disabled veteran who became severely and
31	permanently disabled as a result of injury or illness suffered or
32	incurred during military training in preparation for duty in a combat
33	theater or combat zone of operations who demonstrate a hardship and
34	members of the armed services or a member of the national guard or
35	reserve as defined in 10 U.S.C. Section 101 (d) (1), or a member of the
36	state organized militia, and is called or ordered to active duty for the
37	state, as defined in subdivision one of section six of the military law
38	and who demonstrates a hardship; and
39	(iii) budget assistance programs that provide tools and education to authority customers with an emphasis on low-income customers and senior
40	
41 42	citizens to assist them with obtaining information regarding energy usage and effective means of managing energy costs.
42 12	(d) Energy low-income assistance and education programs made pursuant
43 44	to this section shall be designed to reduce or prevent disconnection of
44 45	utility service to residential and non-residential customers due to any
45 46	potential increase in monthly utility bills.
40 47	(e) Smart grid deployment, if determined feasible and advisable by the
48	trustees, will provide customers with the technological and educational
49	resources to match personal energy usage to periods of reduced or low
50	electric demand within each cooperative's service territory. Smart grid
50 51	infrastructure deployment made pursuant to this section shall:
51 52	(i) be designed to allow for electric customers to obtain real-time
53	retail electric pricing data and consumer demand data within the cooper-
54	ative's service territory through the installation of AMI, which may
55	include smart meters or interactive consumer software and communications
55	applications;
50	

1	(ii) protect customer privacy, including personal financial informa-
2	tion and data relating to personal electrical usage;
3	(iii) allow any customer of a cooperative, at no penalty, fee or
4	service charge, to decline the permission of the cooperative to replace
5	a current meter with an AMI device or install any AMI device at his or
6	her property for the measurement of and storage of electric usage data;
7	(iv) accommodate and encourage the use of smart appliances and plug-in
8	or hybrid electric vehicles; and
9	(v) include initiatives to educate consumers on the proper usage of
10	technologies with the aim of promoting system-wide reduction of peak
11	energy usage.
12	(f) The grid modernization program developed by the cooperative shall
13	ensure that each such cooperative will recruit and maintain adequate
14	certified full-time and part-time employees and contracted workers to
15	carry out the requirements pursuant to paragraphs (a), (b) and (e) of
16	this section. Workforce development programs made pursuant to this
17	subdivision shall:
18	(i) require each cooperative to create a tuition and financial assist-
19	ance fund to cover the costs of training prospective full-time and part-
20	time employees and contracted workers through state universities, commu-
21	nity colleges, boards of cooperative education and other entities
22	accredited by the American National Standards Institute;
23	(ii) require each cooperative to develop workforce recruitment
24	programs to ensure that it maintains sufficient full-time and part-time
25	employees to offset any potential workforce reductions attributable to
26	retirement.
27	3. The grid modernization program shall promote the sustained and
28	orderly development of the statewide electric power grid and protect
29	ratepayers from significant retail electric price increases. A cooper-
30	ative's grid modernization program shall:
31	(a) be designed to include a ten year grid modernization strategy with
32	annual investment targets; rebates for households eligible for energy
33	low-income assistance; consumer education and workforce development
34	plans; advanced meter infrastructure deployment plans for customers with
35	electricity demands less than three hundred kilowatt hours; workforce
36	development, and cyber security systems to protect customer financial
37	information and data relating to personal electrical usage.
38	(b) The total expenditures undertaken by a cooperative for capital
39	investments undertaken pursuant to this section shall not increase elec-
40	tric rates for cooperative customers above two and one-half percent. In
41	the event that such cap would be exceeded, a cooperative shall reduce
42	expenditures in the following reporting year to a level sufficient for
43	achieving grid modernization benchmarks without significant impact to
44	ratepayers.
45	(c) No later than July first, two thousand twenty-three, and every two
46	years thereafter, each cooperative shall submit to the governor, the
47	temporary president of the senate, the speaker of the assembly, the
48	chair of the senate committee on energy and telecommunications and the
49	chair of the assembly committee on energy a comprehensive review of the
50	program established pursuant to this section. The report, among other
51	matters shall contain:
52	(i) an analysis of the cooperative's progress meeting obligations
53	pursuant to this act and progress in meeting the overall annual targets
54	for modernization; and

55 (ii) annual commitments and expenditures.

1 § 10. This act shall take effect immediately, provided that section 2 five of this act shall take effect one year after it shall have become a 3 law.
