

# STATE OF NEW YORK

9105

## IN ASSEMBLY

February 7, 2024

Introduced by M. of A. ANDERSON -- read once and referred to the Committee on Energy

AN ACT to amend the public service law, in relation to advancing grid enhancement technologies

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. The public service law is amended by adding a new section 66-w to read as follows:

§ 66-w. Advancing grid enhancement technologies. 1. For the purposes of this section, the following terms shall have the following meanings:

(a) "Grid enhancing technology" means any hardware or software technology that enables enhanced or more efficient performance from the electric transmission system, including, but not limited to, dynamic line rating, advanced power flow control technology, topology optimization, advanced reconductoring, and energy storage when used as a transmission resource.

(b) "Advanced reconductors" means hardware technology that can conduct electricity across transmission lines and demonstrate enhanced performance over traditional conductor products.

(c) "Dynamic line rating" means hardware and/or software technologies used to appropriately update the calculated thermal limits of existing transmission lines based on real-time and forecasted weather conditions.

(d) "Advanced power flow control" means hardware and/or software technologies used to push or pull electric power in a manner that balances overloaded lines and underutilized corridors within the transmission network.

(e) "Topology optimization" means hardware and/or software technologies that identify reconfigurations of the transmission grid and can enable the routing of power flows around congested or overloaded transmission elements.

(f) "Distribution company" means a company engaging in the distribution of electricity or owning, operating or controlling distribution facilities; provided, however, that a distribution company shall not include any entity which owns or operates plant or equipment used to

EXPLANATION--Matter in italics (underscored) is new; matter in brackets [-] is old law to be omitted.

LBD13870-01-3

1 produce electricity, steam and chilled water, or an affiliate engaged  
2 solely in the provision of such electricity, steam and chilled water,  
3 where the electricity produced by such entity or its affiliate is prima-  
4 rily for the benefit of hospitals and non-profit educational insti-  
5 tutions.

6 (g) "Transmission" means the delivery of power over lines that operate  
7 at a voltage level typically equal to or greater than sixty-nine thou-  
8 sand volts from generating facilities across interconnected high voltage  
9 lines to where it enters a distribution system.

10 2. For rate case proceedings and other proceedings in which a distrib-  
11 ution company proposes capital improvements or additions to the trans-  
12 mission system, such distribution company shall conduct a cost-effec-  
13 tiveness and timetable analysis of multiple strategies, including, but  
14 not limited to, the deployment of grid enhancing technologies, advanced  
15 reconductoring, and energy storage used as a transmission resource.  
16 Where grid enhancing technologies, advanced reconductoring, or energy  
17 storage used as a transmission resource whether in combination with or  
18 instead of capital investments, offer a more cost-effective strategy to  
19 achieve transmission goals, including, but not limited to, distributed  
20 energy resource interconnection, the department may approve the deploy-  
21 ment of grid enhancing technologies, advanced reconductoring, or energy  
22 storage used as a transmission resource as part of the overall solutions  
23 strategy.

24 3. As part of a rate case filing or other filing in which it proposes  
25 capital improvements or additions to the transmission system, a distrib-  
26 ution company may propose a performance incentive mechanism that  
27 provides a financial incentive for the cost-effective deployment of grid  
28 enhancing technologies, advanced reconductoring, or energy storage used  
29 as a transmission resource.

30 4. The department shall promulgate any rules and/or regulations it  
31 shall deem necessary to implement the provisions of this section.

32 5. Beginning five years after the effective date of this section, and  
33 every five years thereafter, each distribution company shall make a  
34 compliance filing with the department, New York independent system oper-  
35 ator (New York ISO), and the commission on or before September first on  
36 the deployment of grid enhancing technologies, advanced reconductoring,  
37 or energy storage used as a transmission resource in a format determined  
38 by the department.

39 § 2. This act shall take effect on the ninetieth day after it shall  
40 have become a law. Effective immediately, the addition, amendment and/or  
41 repeal of any rule or regulation necessary for the implementation of  
42 this act on its effective date are authorized to be made and completed  
43 on or before such effective date.
